

VISHNU VARDHAN MANIKANDAN

Data Analyst | Business Analyst | Business Intelligence Analyst
Adelaide, South Australia | 0490 513 819 | vishnuvardhanaus@gmail.com
linkedin.com/in/vishnuvardhanoffl

PROFESSIONAL SUMMARY

Data and business analyst finishing a Master of Data Science at Adelaide University, with earlier experience as a software engineer and more recently as a freelance analyst. Comfortable across the whole job: sourcing and cleaning the data, building the model or the dashboard, then explaining what it means to people who do not work in analytics. Recent work includes a market entry assessment for an Adelaide manufacturer and machine learning models built on South Australian open data. Looking for a Data Analyst, Business Analyst or BI Analyst role in Adelaide.

SKILLS

Programming	Python, R, SQL, JavaScript, HTML, CSS
Databases	MySQL, PostgreSQL, SQL Server, MongoDB
Analysis	Pandas, NumPy, scikit-learn, XGBoost, statistical analysis, predictive modelling, forecasting, feature engineering, exploratory data analysis
Reporting and BI	Power BI, Tableau, R Shiny, Plotly, ggplot2, Excel, dashboard development, ETL
Business analysis	Requirements gathering, stakeholder engagement, market sizing, scenario and sensitivity modelling, unit economics, CRM data design, process documentation
Web	Responsive design, SEO and metadata, site deployment
Tools	Git, Jupyter Notebook, RStudio, VS Code, AWS
Personal	Communication, teamwork, problem solving, adaptability, attention to detail, time management

WORK EXPERIENCE

Freelance Business Analyst

Freedom Pools, Adelaide SA | 2026

- Engaged directly by the owner to work out whether a partnership channel with home builders and display villages was worth pursuing, and to put the case in writing.
- Built the market sizing from South Australian Government sources: the \$2.5 billion state housing package, its target of 13,500 new homes a year, 13,514 completions in 2025 and 14,863 approvals in the year to February 2026.
- Used published Roy Morgan figures, which put 13 to 14 per cent of Australians in a home with a pool or spa, as the adoption benchmark, and set out why that is a ceiling rather than a like for like rate for new builds.
- Narrowed the target market to the northern growth corridors around Riverlea, Angle Vale, Roseworthy and Playford, where 94 per cent of homes built between 2017 and 2021 were detached. The statewide figure had been overstating the opportunity.
- Modelled revenue and gross profit across a grid of adoption and market share scenarios, then ran sensitivity checks to show which assumption actually moved the result.
- Specified the CRM fields the business would need to capture, including referral source, estate, build stage, quote value, sale status, lost reason, margin and install year, so the channel could be measured once it launched.
- Recommended a small pilot with three to five builders and clear success measures, rather than setting up a full division straight away.

AI and Machine Learning Associate Software Engineer

Meark Enterprise Pvt Ltd, India | Sep 2024 - Dec 2024

- Built an AI driven performance management platform used across the business for KPI and KRA tracking.
- Designed and maintained the MySQL databases and REST APIs behind the reporting, covering schema design, query tuning and validation checks.
- Applied forecasting and predictive analytics to performance data to flag trends and capability gaps, which fed into training plans.
- Sat with managers and team leads to gather requirements and turn them into specifications the development team could work from.
- Produced dashboards and reports for managers with no analytics background.

PROJECTS

AKASA Valley Retreat Website

akasaretreat.com | Live

- Built and launched the public website for a 39 lot land development in Attappadi, Kerala, with the job of bringing in and qualifying buyer enquiries.
- Laid the site out to follow how a buyer actually decides: the valley and masterplan first, then plot detail and remaining availability, with enquiry capture as the one call to action.
- Put the remaining lot count on the page (39 released, 15 still available) so the scarcity is visible rather than claimed.
- Set up the SEO and social layer, including canonical URLs, meta descriptions and Open Graph and Twitter card tags with a custom cover image, so links shared over WhatsApp and social render properly.
- Built mobile first, since almost all traffic for this kind of listing arrives on a phone through a forwarded link.
- Worked the approval and timeline caveats into the copy so the marketing stayed accurate about a development that is not built yet.

SA Crime Analytics Dashboard

Adelaide University, built in R Shiny | 2025 - 2026

- Built an interactive dashboard on South Australian open crime data so users can filter by offence type, time period and location without writing any code.
- Added Pareto and hotspot views that show the small number of suburbs and offence types behind most reported incidents.
- Handled the pipeline end to end: ingestion, cleaning, geocoding and aggregation, with scripts that rerun cleanly and documented assumptions.

SA Crime Hotspot Prediction Model

Adelaide University, Python and R | 2025 - 2026

- Compared Logistic Regression, Random Forest and XGBoost for predicting suburb level crime hotspots, with features built from time and location variables.
- Reported ROC-AUC, precision, recall and F1, and tuned for recall on the basis that a missed hotspot costs more than a false alarm.
- Wrote the results up in plain language for a non-technical audience.

EDUCATION

Master of Data Science

Adelaide University, South Australia | Expected December 2026

Bachelor of Engineering, Information Science and Engineering

Kumaraguru College of Technology, India | Completed 2024

STRENGTHS

- **Communication.** Presents findings to people outside the data team and pitches the level of detail to the room.
- **Teamwork.** Works with engineers, managers and clients throughout a project, not only at handover.
- **Problem solving.** Looks for the cause of a data problem before working around it.
- **Adaptability.** Has moved between software engineering, freelance consulting and postgraduate research across two countries.
- **Time management.** Runs client work alongside full time study and meets deadlines.
